

HP 61, 61XL Cartridge Installation & Troubleshooting

Important: For best quality don't skip the alignment page.

1. A printer without a scanner does not need alignment. If printer doesn't print when cartridge is installed, press power button 1 time (do not hold); printer will start printing.
2. **Printers with Scanners:** Install cartridge and wait 5 seconds for printer to automatically print an alignment page. If printer doesn't print, press power button 1 time (do not hold); alignment page will print out.
3. Place printed alignment page on scanner and press color scan button on printer panel. The green light button should blink at that time.
4. Wait until the green light power button stops blinking. Printer is now ready to print.

Message	Action
Alignment is not finished	Click "Cancel Print" and follow instructions on screen to do alignment page.
Previous used genuine HP cartridge installed	Click "OK"
Need Ink	Click "No Thank You"

Please ignore any pop up message (it should go away within a few seconds) or click "OK" to continue.
